

Mini Bluetooth Keyboard – Black

PRODUCT ID: 3601

. Description

Sure, you have a keyboard. Maybe it's wireless. Maybe it's even Bluetooth. But do you have a *mini* Bluetooth keyboard? Like Halloween candy, this keyboard is fun-size! If Shakespeare had this wee chiclet keyboard back in the day, he definitely would've remarked, "And though it be but little, it is fierce!" We got one of these with a DIY 'tele-prompter' kit and thought it would be great for little Raspberry Pi projects

Packed with Bluetooth V3.0, you can pair it with a variety of devices including Raspberry Pi, PC, smartphone, tablet, and even some gaming consoles! The super slim lil' keyboard boasts a range of 10m, giving you more wireless freedom.

Measuring at 115mm x 60mm x 8.6mm (4.5" x 2.4" x 0.3"), it works comfortably for folks with smaller hands. The first time you use it, we recommend plugging it in to charge, which takes at least two hours. Afterwards, you've got a wireless typing interface for your project!

. Technical Details
